1 (Put down the Time of Obs. when P.M. multiply the long. by 4 and divide by 60 the result will be the long. in time to be added to the Time of Obs. if the Long. be W. but to be subtracted from it if E. the result will be the Greenwich time —

2. When the G. Time is less than 12h. - enter the Naut: Almanac page VII of the month, and in a line with the day of the month take out the Hor. Par. and ☽ semidi. for noon and midnight get their differences - enter table XI B. with the G. Time at top and diff. at the side and take out a correction for each which is to be added to the first ☽ or semidi. taken out if increasing, but to be subtracted from the first Par. or semidi - then enter table XV B with the ☽ alt, and take out a correction which add to the ☽ semidiam - to get the corrected semidiameter -

3 Put down the ☽ Obs alt - the ☉ Obs alt. and the Obs distance in one line - add 12' to both alts when the lower limbs are used - but subtract 20' from the ☽ alt when the upper limb was observed, then you will have the ☽ and ☉ apparent altitudes - To the Obs. dist add the ☽ and ☉ semidiameters and the Sum will be the App. distance — ☉ semidiam. is taken from page 3 N Alman —

whilst Setting the fore top Sail Mr Mumford
wanted to Black the weather Brace he still
persisted in Blacking it & bed the yard was
square I ordered him to Belay it which
he Did with a good Deal of ape & parkion
after the Sail was hoisted up I told him
the yard was not Square then he Said
Sum one had Blacked it I told him that it
had not Been Blacked & Did not want

to see so many of his ones for I would not
not us with them he said then I must stop
his Breath for he was not Born in the west
to be heard by ours I then cald him a sleepy
head told him of sleeping in his water
& at one time when runnig for land he
said he men to to have but the ship a
shore & he'd be Damd if he Did not put
her on shore & he wished that she was
on shore hi & Dry - middle & latter
